15+ Years Experience | 1000+ Projects

1. Executive Summary

Kotapride proposes an integrated search-visibility program combining Advanced SEO, Local SEO, AEO (Answer Engine Optimization), GEO (Generative Engine Optimization), ISM (Internet Search Marketing) and AI-ready optimization practices.

The objective is to build a consistent digital information ecosystem so customers can discover, understand and connect with the brand through search engines, local search, maps, directories, social discovery and AI-powered search experiences.

Visibility → Discovery → Trust → Enquiry → Connection → Growth

2. Strategy Components

Advanced SEO

Technical SEO, on-page SEO, content SEO, search intent, keyword research, website architecture, internal linking, Local SEO, structured data, indexing, crawlability, Search Console analysis, competitor analysis and content-gap analysis.

AEO — Answer Engine Optimization

Question research, intent analysis, answer-focused content, FAQs, how-to content, definitions, problem-solution pages, service/product/location questions and conversational search. Framework: Question → Intent → Answer → Supporting Information → Action.

GEO — Generative Engine Optimization

Clear business/brand/service/product/location entities, topical authority, information consistency, source-supported content, logical content structure, content freshness and digital footprint development for evolving AI-powered search experiences.

ISM — Internet Search Marketing

A broader approach to search and discovery across search engines, local search, Google Business Profile, Maps, business directories, industry listings, social/video platforms, brand searches, service searches, location searches and AI search experiences.

AIO — AI-Ready Optimization

Structure important business information so it is clear, consistent, machine-readable and useful for modern AI-assisted discovery, using entity-focused content, FAQs, structured data and authoritative supporting pages.

3. Local SEO — City-Wise & Area-Wise

For businesses that genuinely serve defined cities, localities or service areas, the strategy can include Google Business Profile optimization, local keyword research, service + city/area pages, local on-page SEO, citations, listings, NAP consistency, local content, competitor analysis, Maps visibility strategy, review-support processes, structured-data review and local monitoring.

Location pages should provide genuinely useful, non-duplicated information rather than simply repeating the same content for different locations.

4. Suggested 90-Day Roadmap

Phase	Focus	Typical Deliverables
01 • Audit	Digital presence	Website audit, visibility baseline, local presence review, opportunity list
02 • Research	Keywords, questions, topics, locations	Intent map, local keyword set, content gaps, competitor observations
03 • Foundation	Website & search structure	Technical fixes, on-page optimization, internal linking, schema review

Phase	Focus	Typical Deliverables
04 • Content	SEO + AEO + GEO	Service/product/location pages, FAQs, answer-led content, topical clusters
05 • Local	City & area visibility	GBP support, listings, local content, NAP consistency, location strategy
06 • Monitor	Measurement	Search data review, issue tracking, opportunities, optimization cycle

5. Business Benefits

- Stronger technical and content foundation for organic search.
- Better alignment with customer questions and search intent.
- Broader digital footprint beyond one search engine.
- City-wise and area-wise local discovery opportunities where relevant.
- More consistent business information across digital properties.
- Clearer path from discovery to website visit, enquiry, call or WhatsApp conversation.
- AI-ready content and information structure for evolving search experiences.

6. Commercial Options

Plan	Investment	Focus
Integrated Search Visibility	■44,444 / Quarter	Advanced SEO + AEO + GEO + ISM + Local Search + content + monitor
Annual Search Visibility	■1,50,000 / Year	Long-term integrated strategy and continuous optimization
Local SEO	■11,000 / Month	Ongoing local visibility and optimization
Local SEO	■25,000 / 3 Months	Structured local search program
Local SEO	■1,00,000 / Year	Long-term local visibility development

Scope and pricing can be adapted after reviewing the website, industry, competition, target cities/areas and business objectives.

7. Important Search & AI Note

SEO rankings, Local SEO visibility, traffic and AI-generated citations depend on competition, algorithms, location, website quality, search intent, implementation and other external factors. Specific ranking positions, traffic numbers or AI citations cannot be guaranteed.

8. FAQs

What is the difference between SEO, AEO, GEO and ISM? SEO focuses on search-engine visibility; AEO on useful answers and question-based intent; GEO on preparing digital information for generative search experiences; ISM on the broader internet search and discovery ecosystem.

Can you target multiple cities? Yes, where the business genuinely serves those cities or areas. Location pages should contain useful, location-specific information.

Can you guarantee #1 rankings or AI citations? No. Search and AI systems are dynamic and depend on multiple external factors.

How long does SEO take? SEO is a long-term process and timing varies by industry, competition, website condition, content quality, domain history, location and implementation.
